

## A B S T R A C T

The vascular prosthesis includes a flexible duct  
that is elastically deformable lengthwise. The  
5 prosthesis also has anadjustable device for fixing the  
spacing between two distant sections of the length of the  
flexible duct. The duct extends beyond at least one of  
the first and second sections so as to form at least one  
segment that is elastically deformable lengthwise.
